Experiment

04:Problem Statement:-

Write a Python program to perfonn tmion, intersection and difference operations on Set A and Set B.

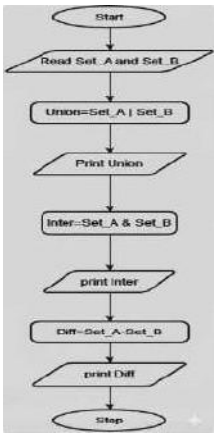
Algorithm:-

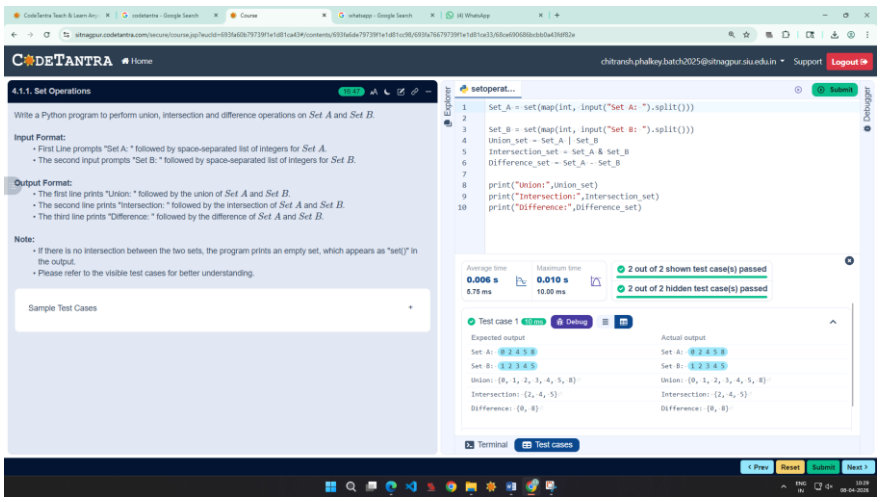
1. Start.
2. Declare two sets A and B
3. Read elements of Set A from the user
4. Read elements of Set B from the user
5. Perform Union operation Union = A U B.
6. Perform Inter section operation Intersection= A ∩
7. Perform Difference operations
8. Difference I — A — B.
9. Display Set A and Set B

I C. Display Union, Intersection, and Difference results

11. Stop.

Flowchart:-





Execution:-
